

P2 HACKING

Starting Point

Why is the dining table/area essential to us?

- It is a commonality in human history and culture regarding getting together and eating since it is closely associated with a basic need.
- Although common, it shows diversity in itself, and that pushes the individuality and the culture of the person on that given table as well as their individual life experiences and allows an outsider a more intimate view of the person in front of them.
- Due to the given reasons above it is a great tool for people to find themselves as well as people who are similar to them and can make connections through it.
- act of sharing personal archive

Idea

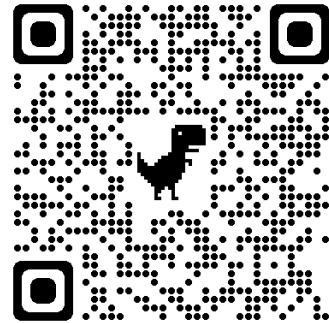

- A website that allows users to eat together and connect through food and store these data (with consent published to the feed section)
- An area where people can share their recipes and enjoyment of food
- A platform that can allow monetization and sponsorships
- Opportunity to help others through food
- Having a platform where all the ideas are together and not separately.

What makes our project different from the previous ones that were made?

- The ones in person can be unsafe as they are predominantly in someone's house. That's why we provide ID verification to make people feel safe.
- It is not dependent on you being in an area in the world and by that, it does not exclude the rest of the world as options to connect and people from participating. (wide range)
- Allow a platform that allows more ways of connecting than one concept
- Can be used for commercial purposes such as the ingredients portion where people can purchase items from various places and sponsorships from content making.

Future Ideas to Implement to the Website

- To implement more original parts that can differ and enrich the platform.
- Allow more space for the user to engage and make the website and their feed personal.
- Have a proper domain and host.
- Make connections to supermarkets, markets, and sellers.
- Implement the portion for donations where people can buy groceries for others who need them. (**edit after presentation:** make it anonymous so people who need it can reach it without having negative emotions. Similar to Askıda Simit and Askıda Ekmek that is available in Turkey where you can go to a simit seller or a baker and if

they provide service you give the money for however many extra produce you want and someone who might need can come and get it without paying for the fee.)
